When Dementia Affects a Patient
2 CEs

Keri Walker, MS

With the increasing proportion of older adults in society, it is more likely than ever that dental hygienists will encounter patients who have dementia. This course provides an overview of what dementia is, and how the disease impacts individuals' behaviors and ability to communicate. Participants will learn practical techniques and tips for working with patients with dementia, which will enhance safety and overall outcomes. Applied activities will provide opportunities to practice the presented techniques.

The New Wellness Exam 3 CEs

Dr. Tim Donley, DDS, MSD

Make no mistake about it: When it comes to overall health, the dental hygienist is the most important member of the health care team. Today's dentistry is no longer just about the teeth...it's about inflammation. Inflammation is at the root cause of many of the chronic diseases of aging. The evidence is clear that the mouth can contribute to the overall level of inflammation when periodontal disease persists. Many of the risk factors for systemic disease also affect periodontal disease. By managing the risk factors we have in common with medicine, today's dental hygienist can help their patients achieve better oral and overall health. This course presents a comprehensive exam protocol for easily incorporating wellness screening and therapy into existing dental practices. This is a fast-paced learn-it-today-use-it-tomorrow seminar supplemented with practice management materials, making managing patient's oral and overall information easy and efficient.

Oral Health Does the Heart Good 2 CEs

Kim Newlin, RN, CNS, ANP-C

Course Objectives:

- Summarize the links between oral and general health
- Review evidence of the relationships between

- oral and cardiovascular health
- Identify patients who need prophylactic antibiotics and/or modifications to their anticoagulant and antiplatelet medications prior to dental procedures
 - Know guidelines for care of CVD patients in the dental office
